

INHALANTS: POISONS RIGHT UNDER YOUR NOSE

Inhalants are common household products whose vapors, when intentionally inhaled, are dangerous poisons and toxins that can cause sudden death or significant damage to the brain and other organs.

Young adolescents are most likely to use inhalants.

*Alarming, past 30-day use of inhalants by Virginia eighth-graders is twice the national average.**

Parents and community members need to learn about inhalants to protect our children and youth from the dangerous consequences of inhalant use.

*SAFE, Chesterfield County's substance abuse prevention coalition, invites you to a special event about inhalants during **National Inhalants and Poisons Awareness Week**.*

INHALANTS: POISONS RIGHT UNDER YOUR NOSE

*featuring Harvey Weiss, Executive Director
National Inhalant Prevention Coalition*

Tuesday, March 20, 2007

Monacan High School Auditorium

1501 Smoketree Drive
Richmond, Virginia 23236

7 p.m.

The event is free and open to all parents and other adults. Because the event will include information about how products are abused, **please do not bring children or teens.** You will learn how to talk appropriately about this issue to children and adolescents.

For additional information, contact (804) 796-7100.

*2005 Virginia Community Youth Survey administered to students in Virginia public schools in grades eight, 10 and 12.
